

**ROS**<sup>®</sup>

minimum size, **maximum fidelity**

La Ros srl produce modelli in scala di altissima qualità in metallo pressofuso dal 1982.

La gamma di prodotti comprende macchine da costruzione in scala 1:50 macchine agricole in scala 1:32, gru edili in scala 1:87 e macchine speciali in varie scale 1:25/1:43/1:23 rigorosamente in scala sulla base di disegni ufficialmente approvati dalle rispettive case costruttrici.

La Ros, per ragioni di elasticità, e per una libera struttura operativa, si avvale di collaboratori esterni per stampaggi, pre-assemblaggi e verniciature.

All'interno vengono eseguiti gli assemblaggi finali, le spedizioni e un rigido controllo della qualità di ogni singolo articolo.

Questa politica aziendale ha permesso alla Ros di applicare dei prezzi molto competitivi, con articoli di alta qualità, in modo tale da essere conosciuta in Italia e all'estero.

La realizzazione di tutti i nostri articoli viene effettuata congiuntamente con la casa madre per raggiungere un'immagine che distingua il nostro prodotto sul mercato.

Tutti i nostri prodotti sono distribuiti in Italia, da negozi e grossisti, e nei paesi esteri da distributori ed importatori.

Ros srl has been producing extremely high quality die-cast scale-made models (not toys) since 1982.

The range of products includes construction machines in scale 1:50, agricultural machines in scale 1:32, Cranes in scale 1:87 and various special machines in different scales, which are equipped with accessories and rigorously scale-made, based upon drawings officially approved by the respective firms.

Ros, which is flexibility-oriented and based on a free operating structure, has chosen to have all moulding, assembling and painting operations out-house.

Some assembling, shipments and strict quality checks on every single product are made in-house.

This company policy enables Ros to offer much more competitive prices and high quality articles to its customers. For this reason it has reached a great success in Italy and abroad.

All the products from the range of Ros are distributed in Italy and in the other countries through shops and mother-companies.

Ros has produced scale models for important Italian and European Companies such as Toyota, Sennebogen, Amman, Casa-grande, Scaip Holmer, Horsch, Krone, Grimme, Pellenc, Joskin, Gregoire Besson, Merlo, Saez, Comansa, etc.

The full range of items can be seen on the website [www.ros-srl.it](http://www.ros-srl.it).

The manufacture of Ros' articles is made in close link with the mother company in order to achieve an image strongly characterising the product on the market.

All Ros' models are excellent quality products realized by using plastic molding and die-cast metal.
